ADVANCED DIAGNOSTICS

HIGH VOLTAGE

The charger is in standby or the battery voltage is too low for the charger to detect.

BAD BATTERY

There is a possible battery short or the battery will not hold a charge. Consult a professional.

REVERSE POLARITY

Charger is connected to the battery in reverse. Reverse the connections.

STANDBY

The charger is in standby or the battery voltage is too low for the charger to detect.

CHARGE LED

Indicates the charge level of the internal battery.

THERMAL COMPENSATION.

The new integrated thermal sensor automatically monitors and adjusts the charging cycle based on fluctuations of ambient temperature, limiting the chance of under-charging or over-charging, providing a more accurate and fully charged battery.
